Introduction

Inventory in a horse business includes your expendable supplies like hay, grain, supplements and medications that are consumed in less than one year. Inventory can also be horse tack, hand tools and other miscellaneous noncapital equipment that needs to be tracked and managed for insurance or tax purposes.

Inventory is not just the quantity of supplies and material on hand; inventory can have a significant financial impact on your business. The financial impact not only includes the inventoried items cost, but also includes the expense to maintain and properly store inventoried items. To properly manage inventory, the inventory should include an inventoried item's delivered (received) date, the quantity of inventoried items purchased, the total cost of the inventoried items purchased and an inventoried item's unit cost. Inventory is often referred to as 'cash at rest' – *and inventory does not pay interest*. The amount of cash tied up in inventory can be significant; therefore, its management is essential. Inventory management can help improve your profitability and maximize your available cash to improve and grow your business.

Some horse boarding, training and lesson businesses also sell tack for additional income and as a service to their customers. Horse businesses that sell tack need to manage and transact their tack sales. To support their customers, and not miss a sale, while still minimizing their 'cash at rest', they need to manage their on hand tack inventory and their tack reorder requirements.

There are several things to think about when you are setting up your inventory or starting to manage an existing inventory. What if your horses require different types of hay or grain? Your pregnant brood mares may require different types of hay or grain during their gestation period. Your performance horses may require different types of hay or grain during their training, show and idle periods? Many expendable supplies have an expiration date (shelf life). Hay is a good example. Hay needs to be stored off the ground with good air circulation. Hay should also be stored away from direct sunlight. Hay stored outdoors without being covered will show a significant reduction in quality, dry matter and nutrients after only three months. No matter how your hay is stored, its nutritional value will decrease over time. Therefore, it is important to purchase your hay in quantities, not only at the best price, but to maintain its nutritional value. Your grain inventory requires many of the same considerations. Grain that is not properly stored can spoil or be wasted. Moldy grain can lead to sick horses and some cases, the dreaded colic.

Inventory can be valued in one of three ways, first-in, first-out (FIFO); last-in, first-out (LIFO); and weighted average (WAC). The first in, first out (FIFO) assumes the first items purchased are the first items used. This means that the older inventory will get used before the newer inventory, and the value of the inventory used represents the most accurate supplies' expense. The last-in, first-out (LIFO) assumes the last items purchased are the first items used. This means that the newer inventory will get used before the older inventory. The value of the inventory used will not represent the most accurate supplies' expense. The accuracy can be improved with '*Just In Time*' inventory management – what is needed, when it is needed, but not more than is needed. The weighted average (WAC) method assumes that all inventoried items are identical. Weighted average (WAC) would not be used in a horse business and first-in, first-out (FIFO) is too difficult to manage. The easiest to manage from a minimum cash and expense perspective is first-in, last-out (LIFO) using '*Just In Time*' management and replenishment.

equineGenie Inventory

equineGenie enables you to track, measure, manage and report on any type of supplies, capital and noncapital items you want to inventory. The inventory managed by equineGenie is not just its quantity. equineGenie's inventory management includes an item's delivered (received) date, the quantity of an item purchased, the total cost of the items purchased and an item's unit cost. Embedded in equineGenie are AI (artificial intelligent) algorithms for predictive modeling, resource optimization and heuristics. equineGenie learns your business and makes sure you have the supplies and other inventoried items on hand when you need them, but not more than you need - 'Just In Time', thus conserving your cash, minimizing your 'cash at rest' and providing an accurate supplies' used expense. equineGenie reminds you when an inventoried item needs to be replenished.

equineGenie enables you to identify, measure and manage your different types of inventory. For example; your forage in equineGenie has a primary account is, 5520 – Horse, Forage (Hay). If you have different types of forage you need to purchase, manage and inventory, equineGenie assists you in identifying the forage types with subaccounts associated with the 5520 – Horse, Forage (Hay) primary account.

For example; if you feed both timothy hay and alfalfa, each type of forage can have its own subaccount, 5520.001 – Timothy Hay and 5520.002 – Alfalfa. equineGenie will account for your forage cost in total and the cost of each type of forage used. The same primary account / subaccount opportunity applies to any item you need to purchase, manage and inventory. In equineGenie, you can have as many as 999 subaccounts associated with any primary account.

Primary and Subaccounts Example

Make Believe Ranch		
		
General Ledger - Chart Of Accounts		
Account Categories	Accounts	SubAccounts
5000 - 9999 Expenses	5520 - Horse, Forage (Hay) <i>Primary Account</i>	5520.001 - Timothy Hay 5520.002 - Alfalfa <i>Subaccounts</i>

Detailed information on setting up your chart of accounts and subaccounts is available in a Genie Academy training document: [20230914112044_427163.pdf](#) (Financial Setup: GL / Chart of Accounts Setup, pages 3 -5).

equineGenie values inventory using the first-in, first-out (FIFO) method and 'Just In Time' replenishment. This equates to an inventory value based on an item's last purchase cost. equineGenie's inventory management helps to minimize your inventory quantity and cost while improving your supply expense accuracy by receiving expendable supplies on an as-needed basis, 'Just in Time'. To minimize the inventory quantity and its cost the resource optimization and

predictive modeling algorithms include an item's assigned safety stock and a supplier's delivery time. This maximizes inventory turnover and minimizes inventory waste, loss and 'cash at rest'.

equineGenie inventory management requires that you establish your inventory parameters before you count your existing inventory or add any new inventory. Because inventory has a quantity and a financial component, you need to establish an inventoried item's unit of measure and its unit cost. To establish an item's unit of measure you need to consider how the item is used or consumed.

For example; horse forage can be purchased in many configurations, by the bale (square and round), by the bag, by weight, loose, etc. However, horse forage is feed by the pound or kilogram in a well-managed horse business. Therefore, it is inventoried by its unit of measure because it is consumed by its unit of measure and its inventory is reduced by its unit of measure. equineGenie manages your horse forage inventory daily based on the established unit of measure and how much is used or consumed each day by each horse.

'I know, you feed by the flake, so – weight several flakes to get an average weight of each flake. Embedded in the equineGenie's 'Horse - Horse Nutrition' screens are a video link on how to easily measure the weight of the feed you are feeding.'

Feed Weight Video Link

***How to Weigh Equine Feed Tutorial** 

You also need to establish a safety stock for your inventoried items so you have what you need when you need it, but not more than you need to minimize waste, spoilage and 'cash at rest'. If the consumption rate of an inventoried item changes, equineGenie learns the change and readjusts any replenishment reminders.

Inventory Count Prerequisites

Before an inventory count can be taken there are one time setup prerequisites and an initial purchase of the inventoried items that need to be satisfied. equineGenie manages horse businesses all over the world and supports both the English and Metric measurement system and multiple country currencies.

Business Preferences

The first prerequisite is to establish the business's measure system and currency. In equineGenie a business's measurement system and currency is identified on the *Business Owners - Preference* screen.

Detailed information on identifying the business's measure system and currency is available in a Genie Academy training document. The link to the training document is:

[20230630123015_420554.pdf](#) (Business Information: Business Information – Preferences, page 6-7).

Items Supplied Setup

Next, every inventoried item needs to have its unit of measure identified before an accurate count can be taken. An item's unit of measure is identified on *the Business Operations – Item Supplied Setup* screen.

Detailed information on identifying an item's unit of measure is available in a Genie Academy training document. The link to the training document is: [20231006234514_429288.pdf](#) (Business Operations: Business Operations – Item Supplied Setup, page 5-8).

An item's inventory category, supplier, safety stock, unit of measure and delivery lead time can be established on the *Business Operations – Item Supplied Setup* screen when an item's unit of measure is identified and locked.

Notes

An item supplied setup is only done once for each purchased and inventoried item. A change can be made to an item that has been previously set up. An item's set up makes the item and the item's supplier available on any associated equineGenie screens without having to be reentered.

Purchases

Remember, inventory is not just a count it also has value and is therefore financially significant and has an impact on your available cash. To establish an item's inventoried value, the item needs to be purchased in equineGenie so its unit cost can be established before it is counted. An inventoried item's purchase date, delivery date, purchased quantity, total quantity purchased cost and unit cost are established when an item is purchased on the equineGenie *Business Operations – Purchases* screen.

Detailed information on purchasing an item is available in a Genie Academy training document. The link to the training document is: [20230630123015_420554.pdf](#) (Business Operations: Business Operations – Purchases, page 9-13).

Purchase Reports On Next Page

The quantity of the selected item to be purchased needs to be consistent with the item's unit of measure identified on the '*Business Operations – Item Supplied Setup*' screen.

For Example: If you are purchasing horse forage, the unit of measure should have been identified as pounds or kilograms when the type of horse forage was setup on the '*Business Operations – Item Supplied Setup*' screen. Therefore, the quantity of horse forage being purchased needs to be in pounds or kilograms. If you are purchasing a ton of horse forage the quantity entered would be (~2,204 US pounds). equineGenie uses the total cost of the quantity purchased to calculate the item's unit cost. The unit cost of an item is used to calculate the value of the item's quantity in

inventory. An item's unit cost is also used to assign the item's expense to an activity, task or horse when it is used or consumed.

For Example: If you are purchasing grass hay, and you pay \$75 for 500 pounds, equineGenie will calculate the unit cost is \$0.15 for each pound. If you have 600 pounds of grass hay in inventory after the purchase is complete, equineGenie values your grass hay inventory at \$90. If you feed 20 pounds of grass hay to a horse each day, equineGenie assigns \$3.00 per day of grass hay expense to that horse and deducts the 20 pounds of grass hay from inventory daily.

equineGenie Inventory Management

Remember, inventory has both a numerical count and a financial value. Inventory is not just a number; inventory is also a business asset. If a business is new and the inventory is just being set up, purchasing an item will establish the item's initial quantity and its unit cost from the item's purchased quantity and its total cost. An item's unit cost is calculated by equineGenie. equineGenie divides the total cost of the item purchased by the total quantity purchased. To establish the measurement parameters for an existing inventory, you need to establish the unit cost of each item before an item's physical count can be taken. The next purchase of an item in equineGenie will provide its unit cost.

An inventory count can be done at any time. Counting inventory can be time consuming and expensive. Good inventory business practices will extend the time between taking inventory. Taking inventory every three months is probably a good idea until you have good inventory management in place. Good inventory business practice starts with business discipline. Your business management discipline is as important as your horse management discipline. Keep your purchased items up to date, execute your purchase reminders on time and enter your purchases in a timely manner.

Counting Inventory in equineGenie

An item's physical count can be taken and recorded in equineGenie using the '*Business Operations – Supplies On Hand*' screen. An item's unit of measure and its last unit cost will be displayed. You can enter an item's count, by location. equineGenie will report an item's inventory count for each location and the item's total count for all locations. equineGenie adjusts the amount of inventory on hand and recalculates its value based on an item's last unit cost. Remember, you must have previously established an item's unit cost before taking inventory.

Detailed information on counting an item in inventory is available in a Genie Academy training document. The link to the training document is: [20231007162122_429330.pdf](#) (Business Operations: Business Operations – Supplies On Hand, page 4-6).

Notes

- ① **Enter the inventory date** in The *Count Date* dropdown or select the date from the calendar icon. Selection of **[New Date]** from the dropdown will display the computer's current date. The current date can be changed by mousing over the date and entering the desired date.

Note 1: The count date can be entered by selecting the date from the calendar icon or by selecting **[New Date]** from the dropdown and entering the desired date in the date format set in your windows operating system. (mm/dd/yyyy or dd/mm/yyyy).

- ② **Select the item to be inventoried** from the *Select Item* dropdown.
- ③ **The item's unit of measure and its last purchase unit cost** will be displayed.
- ④ **Enter or select the item's location** in the *Enter/Select Item's Location* dropdown.

Enter the inventoried count in the *Quantity / Location* box for each location if the item is located in multiple locations.

Select the green *Count Complete* button for the inventory count in each location.

If the item is located in multiple locations, selected **Multiple Locations Same Item** and repeat the item count for the next location until the item's count is complete for all locations.

Important: equineGenie will keep track of the inventory count in each location and will calculate the total inventory count for the item being counted.

⑤ equineGenie will calculate and display the inventory status.

- **Running Total Units:** Displays the selected item's total quantity on hand.
- **Total Units Counted:** Displays the new quantity of the item being counted.
- **Total Value:** Displays the monetary value of the selected item on hand.
- **Previous Units Counted:** Displays the previous count of the selected item before the new count.
- **Previous Units Cost:** Displays the selected item's cost when the previous count was taken.
- **Count Adjustment +/-:** Displays the overage or shrinkage since the last item's count.
- **Item Value Change +/-:** Displays the greater than (>) or less than (<) value change since the last item's count.

⑥ An inventory count taken for a selected item on a selected date can be removed. The complete count information needs to be displayed. When the **Remove Selected Count** button is selected a **Delete Item** popup will be displayed to make sure you want to delete the count. Selecting OK will delete the receipt from equineGenie.

Important: The Delete Item popup needs to be selected twice to remove the count from the inventory and the inventory location database tables.

✓ **Enter any inventory comments** in the *Inventory Comments* box before **Enter**⑦ is selected.

⑦ **Selecting Enter adds selected item's inventoried count** into equineGenie.

Note 2: There are several equineGenie inventory reports available on the *Business Operations – Supplies On Hand* screen and in the business operations report section.

Using and Consuming Inventory in equineGenie

There are inventoried items that are set up to be used or consumed on a predetermined schedule. These items are automatically removed from inventory without any user intervention. A scheduled item's safety stock and delivery lead time are used by equineGenie in the predictive modeling and resource optimization AI algorithms to remind you when the item is below safety stock and needs to be replenished. This conserves your cash and makes sure you have what you need, when you need it, but not more than you need – *'Just In Time'* inventory management.

An example of predetermined and scheduled inventory items is your horses' nutrition and bedding. When each horse's feed, supplements and bedding amount is scheduled in equineGenie, equineGenie automatically removes the total amount of each type of feed, supplements and bedding used daily for each horse from inventory and expenses (assigned) the cost to each horse.

Detailed information on setting up a horse's nutrition and bedding is available in a Genie Academy training document: [20230614175540_419318.pdf](#) (Horse Nutrition: Horse Forage, Grain and Supplements, page 4-12) and (Horse Nutrition: Bedding, page 17-18).

Horse Nutrition and Bedding – Amount and Schedule Setup

The screenshot displays four windows from the equineGenie software, each for setting up a different type of horse inventory item: Forage, Grain, Supplements, and Bedding. Each window follows a similar layout with a left sidebar for setup options and a main area for input and comments.

- Forage Setup:** Includes fields for 'Select Horse', 'Forage Type', 'Feeding Time', 'Weight Per Feeding', and 'Weight Units'. It has buttons for 'Enter' and 'Video Tutorial'. A 'Forage Comments' text area is on the right.
- Grain Setup:** Similar to Forage, with fields for 'Select Horse', 'Grain Type', 'Feeding Time', 'Weight Per Feeding', and 'Weight Units'. It also has 'Enter' and 'Video Tutorial' buttons and a 'Grain Comments' text area.
- Supplements Setup:** Includes fields for 'Select Horse', 'Supplement', 'Feeding Time', 'Weight Per Feeding', and 'Weight Units'. It has 'Enter', 'Video Tutorial', and 'Notes' buttons. A 'Supplement Comments' text area is on the right.
- Bedding Setup:** Includes fields for 'Select Horse', 'Bedding Type', 'Amount / Day', and 'Amount Units'. It has 'Enter', 'Video Tutorial', and 'Notes' buttons. A 'Bedding Comments' text area is on the right.

Each window also contains instructional text and links to related setup screens or documentation. The interface is blue-themed with white text and yellow highlights.

**Fecal Exam results are reported in the Horse Care :Medical Tests.*

There are many other horse *Preventative Care* reports available on the *Preventative Care* screens in the *Horse Reports* section.

Another example of a task using an inventoried item that is not automatically removed from inventory is when a mare is inseminated. When a mare is inseminated, equineGenie does not remove any supplies that were used from inventory.

For example, mare insemination pipettes, an ovulatory agent, caslick material, etc. You need to remove the supplies used by selecting the '*Supplies Used? Go To Enter Supplies*' button. Selection of the button will display the '*Supply Used*' screen where the supply used can be deducted from inventory and expensed (assigned) to the mare.

Detailed information on breeding a mare is available in a Genie Academy training document [20230830195539_426057.pdf](#) (Mare Breeding Management, page 9-12).

Mare Reproduction – Breeding Supplies

The image shows two overlapping windows from the equineGenie software. The top window is titled 'equineGenie - Mare Reproduction - Breeding'. It features a sidebar on the left with several sections: 'Mare Breeding (page 2 of 2)', 'Mare Bred' (with 'Date & Time Mare Bred' and 'Administered By' fields), 'Caslick Performed?' (with 'No' selected), 'Caslick Removed?' (with 'No' selected and a 'Date' field), 'Business Cost' (with a 'Cost' field), and 'Supplies Used? Go To Enter Supplies' (which is highlighted with a checkmark). Below these are links for 'Mare Breeding Dates - Current Year', 'Mare Breeding Dates - Dates Specified', 'All Mare Breedings - Current Year', and 'Caslicks Status'. A note at the bottom of the sidebar states: '*Additional Mare Breeding Reports are available in the Horse Reports: Mare Reproduction'. The main area of the window is titled 'Breeding Comments' and contains a large text area, a 'Rebreed' button with a 'Rebreed Date' field, and buttons for 'Enter', 'Video Tutorial', and 'Enter and Charge the Horse/Customer (Go To Horse Billing Log)'. The bottom window is titled 'equineGenie - Business Operations - Supplies Used'. It has a sidebar on the left with 'Supplies Used/Removed' (containing 'Date', 'Select The Item Used / Removed' (with a checkmark), 'Item Quantity' (with a checkmark), 'Unit of Measure', and 'Another Item' fields) and 'Supplies Used Comments' (with a large text area, 'Enter' and 'Video Tutorial' buttons, and a 'Popup And Red Flag' button). A red arrow points from the 'Supplies Used? Go To Enter Supplies' button in the top window's sidebar to the 'Supplies Used' window.

There are many other tasks and activities where the use of an inventoried item is not predetermined or scheduled. The associated screen will all have the '*Supplies Used? Go To Enter Supplies*' button that can be selected to remove any items used from inventory. Selection of the '*Supplies Used? Go To Enter Supplies*' button will display the '*Supply Used*' screen. Selecting '*Enter*' on the '*Supply Used*' screen will remove the associated item from inventory, close the screen and redisplay the previous screen.

There are also some tasks and activities where a supply is used, but the screen where the information is entered does not have a 'Supplies Used? Go To Enter Supplies' button. If the task or activity uses an item that is in inventory, the item can be removed from inventory by selecting the 'Supply Used' screen. The 'Supply Used' screen is available on the business operations section, 'Business Operations – Supplies Used'.

Detailed information on breeding a mare is available in a Genie Academy training document [20231007162122_429330.pdf](#) (Business Operations, page 7-8).

Horse Tack Sale Inventory

If your horse business sells tack, equineGenie can measure, manage and transact your tack sales. equineGenie can track, measure and manage your tack inventory. A sale that is not invoiced can be transacted on the 'Customer / Clients Billing – Service/Product Receipt' screen.

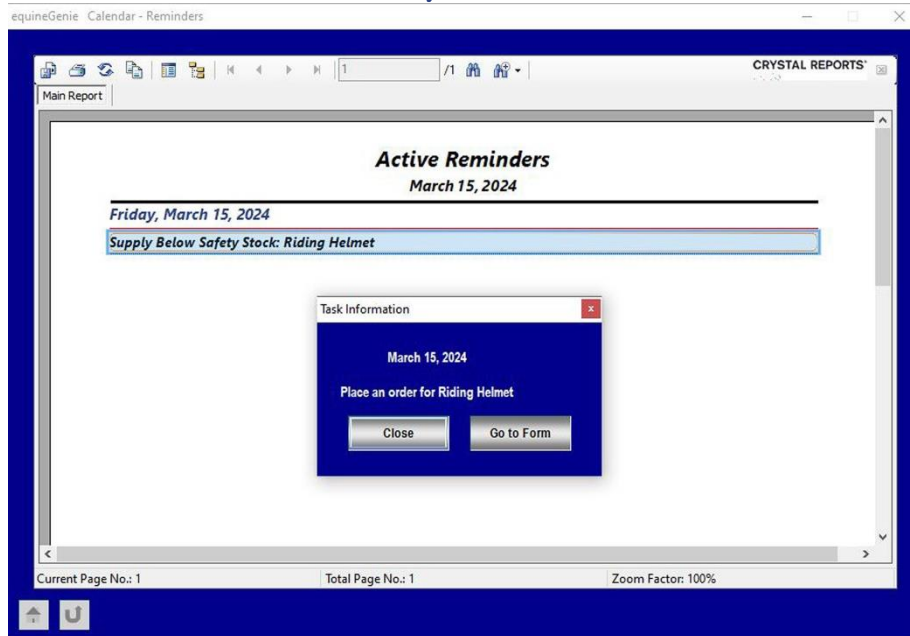

For example; if you sold a riding helmet you would transact the helmet sale and then remove the helmet from your inventory. If the riding helmet sale reduced your riding helmet inventory below your riding helmet safety stock amount, equineGenie will alert you the purchase more riding helmets.

Detailed information on transacting a receipt sale is available in a Genie Academy training document, [20230817120921_424700.pdf](#) (Customer Billing Management: Customer / Client – Receipt, page 33 - 35).

Sales Receipt Example

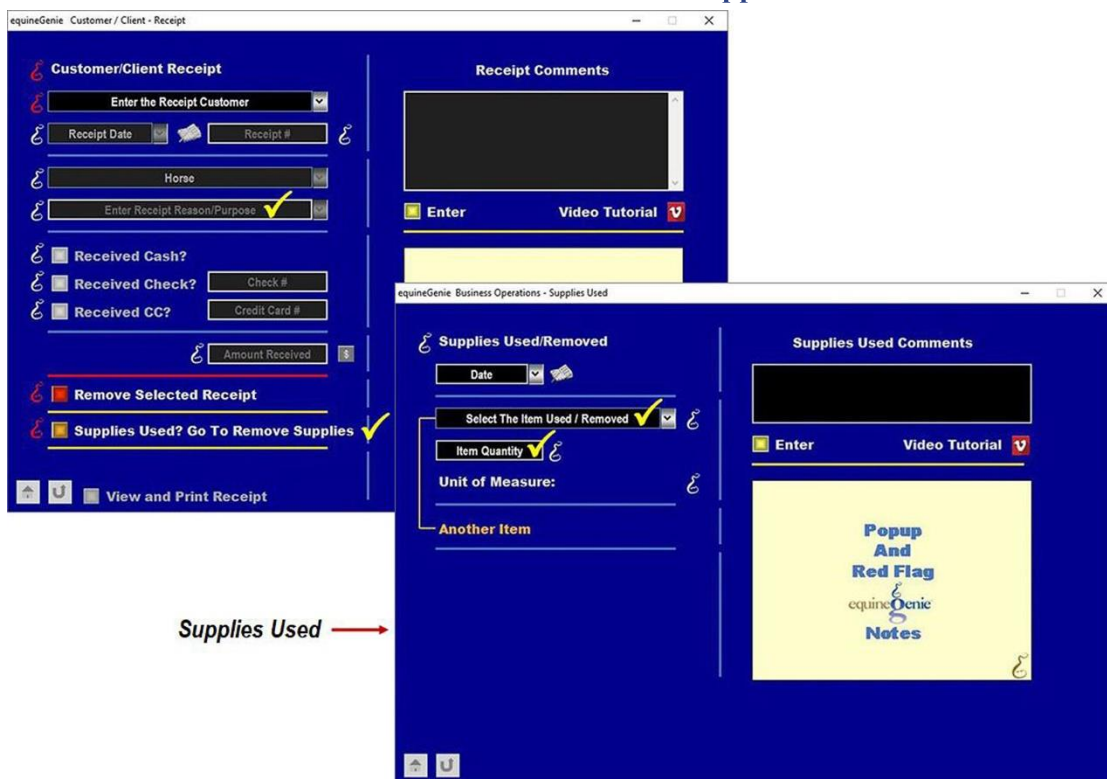

Sales Receipt			
Make Believe Ranch			
Sally Jones		03-1523-1	
		Friday, March 15, 2024	
Payment Method	Transaction #		
Check	5678		
Account	Description	Amount	Comment
	Riding Helmet	\$ 279.95	Potential Future Lesson Student.

Tack Inventory Reorder Reminder

Tack sales that include tack supplies in inventory are removed by selecting the 'Supplies Used? Go To Remove Supplies' button. Selection of the button will display the 'Supply Used' screen where the supply used can be deducted from inventory.
